Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/622,674

Applicant(s)

SHUKER, JOHN

Examiner

MATTHEW SULLIVAN

Art Unit

3677

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 August 2000.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-7 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-7 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 21 August 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Braithwaite, U.S. Patent 1,207,270 (12/5/16) in view of Riblett, U.S. Patent 5,412,842 (5/9/95).

Braithwaite clearly teaches a hinge assembly (fig. 1) including a first hinge leaf (6) connected to a second hinge leaf (7) by a hinge pin (13), a check mechanism (fig. 3) operably connected to the hinge pin and one hinge leaf to releasably hold the first and second hinge leaves at at least one angular position about the hinge axis, the check mechanism includes a check body (18) rotatably located against an annular cam track (see fig. 5), the check body including two or more check members (17) which are spaced from one another circumferentially about the hinge axis, the check members being biased in a vertical direction relative toward the hinge axis to engage and run along the cam track, the check means being driven along the annular cam track by relative rotation between the first and second hinge leafs, the cam track including at desired location therealong one or more check formations (23) which co-operate with the check means to releasably retain the first and second hinge leafs at a desired angular position relative to one another, the cam track being formed on a reaction

Art Unit: 3677

member (21) which is non-rotatably located in a housing fixedly secured to one hinge leaf (see fig. 3, elements 18, 9, see page 1, lines 90-93) and the reaction member being in the form of an annulus (see fig. 5). Braithwaite does not teach the hinge pin being rotatably mounted in one hinge leaf and non-rotatably mounted in the other hinge leaf nor does Braithwaite teach the check members biased in a radial outward direction relative to the hinge axis. Riblett teaches a detent hinge wherein a hinge pin (58) is rotatably mounted in one hinge leaf and non-rotatably mounted in the other hinge leaf (see Col 3, Lines 43-50) the check members biased in a radial direction (inwardly). At the time of the invention it would have been obvious to one of ordinary skill in the art to provide Braithwaite with the teachings of Riblett and modified such that the check members would be biased outwardly because a rearrangement of parts and a reversal of parts is generally considered within the ordinary skill of one in the barring any unforeseen result and applicant has not provided any evidence that the check members being biased outward solves any stated problem or produces any unexpected result, *In re Japikse*, *In re Gazda*, **[Claim 1]**.

The examiner notes that these claims are considered to be product-by-process claims due to the limitations "formed from sintered metal" and "formed as a metal pressing". "Even though product-by-process claims are limited by and defined by the process, the patentability of the product does not depend on its method of production. Determination of patentability is based on the product itself. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was

made by a different process", *In re Thorpe*, 227 USPQ 964, 966. See MPEP 2113.

Regarding **Claim 2**, Braithwaite teaches the housing (9) having a bottom wall and an open top 9see fig. 3) closed by an end cap (11) and the check body being located in between the bottom wall and end cap and the hinge pin being rotatable supported in the bottom wall and end cap.

Regarding **Claim 3**, the Braithwaite-Riblett combination teaches the check formations in the form of recess spaced along the cam track into which the check members are received in order to releasably retain the hinge leafs at a desired angular position relative to one another (see Braithwaite, fig. 5, element 23).

Regarding **Claim 4**, Braithwaite clearly teaches the recess arranged in one or more groups corresponding to respective check positions, the recess in each group corresponding in number and circumferential spacing to the number and circumferential spacing of the check members such that at a desired check position all check members are located in a corresponding recess of the group (see below).

Regarding **Claim 5**, both Braithwaite and Riblett teach the check members in the form of balls (see elements 17 and 73-75).

Regarding **Claim 6**, both Braithwaite and Riblett teaches each ball located in a bore (see Riblett element 66, see Braithwaite element 15) and resilient means housed in those bores for biasing the balls outwardly or upwardly (see Riblett element 190, 191, see Braithwaite element 10). The combination of Braithwaite-Riblett teaches the balls being biased radially outward.

Regarding **Claim 7**, Riblett teaches the other hinge leaf being axially withdrawable from the hinge pin so as to define a lift-off hinge assembly.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MATTHEW SULLIVAN whose telephone number is (571)270-5218. The examiner can normally be reached on Mon-Thurs, 8:00 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Victor D. Batson can be reached on 571-272-6987. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
